

# The Data Protection Audit Obligation

The Data Protection Officer is obligated to conduct regular data protection audits, Art. 39(1)(b) GDPR. We fulfill this obligation by bringing in our audit system.

The content of our audit system is based on the General Data Protection Regulation and other Union or Member State laws. The system uncovers critical points and infringements and automates the generation of your personalized data protection documentation.

**01 Arranging an Appointment**  
Audit appointments can be planned for various international locations, coordinating everything across time zones and directly in the system.

**02 Conducting the Audit**  
The auditor asks the responsible personnel, either directly on-site or in an online meeting, a defined set of questions. This represents our basis for examining your compliance.

**03 Audit Reporting**  
In a detailed audit report, we uncover critical issues and elaborate for the management level appropriate measures for solving them.

**04 Documentation**  
Our system generates data protection documentation based on your information and according to your individual needs.

## AUDIT-SYSTEM: DATA PROTECTION TECHNOLOGY FOR COMPLIANCE

We focus on incorporating data protection by design. Our multilingual audit system is able to serve multinational corporations and local SMEs. It enables both a technical and legal audit, and therefore is a comprehensive examination of company compliance.

+ legally compliant

+ secure

+ europe-wide
